Web Development

Ferris State University
Digital Animation & Video Game Design courses covering 2D and 3D animation, illustration, design, and game programming.

» projects

Redstone Advertising
Redstone Advertising had an outdated site with a brand that no longer matched the company's culture. So, we decided to start from the beginning; rebranding, designing and developing a site that says we're professional, friendly, and we can handle anything. This project was built from the ground up with responsive design, intuitive UI, and WordPress on the back end ties it all together with a CMS that's easy to use.

Lincoln Calling
This project was completed by creating a custom Wordpress theme with HTML, CSS, SASS, JavaScript, and PHP. This new Lincoln Calling theme was created with the client in mind: easy for the owner to update and add new posts through the Wordpress CMS, while all of the content is dynamically generated for users around the country.

Cerious Technologies
View this project live on November 24th! - An audio company based in Phoenix, AZ, they are in need of a complete web presence overhaul. We have redesigned the front-end using HTML, CSS, SASS, and JavaScript, and will be implementing the back-end and e-commerce side of the site in the coming weeks.

Dyer Law Blog
Dyer Law wanted to freshen up their web presence and boost their SEO with a new blog. We got together and went the creative route with a modern masonry layout for desktop and a clean single-card style on mobile. Responsive, quick, and easy to navigate, they are happy with their new blog. Powered by WordPress on the back end, adding content is simple and easy.
